Agency Landing Page & Demo Software

Agent-ready build brief for Prism Hotel Management - a digital growth agency that builds websites and software for hotels.

PURPOSE: Hand this document to an AI coding agent. It contains every decision needed to build the site without follow-up questions.

VISUAL REFERENCE: Taj Jai Mahal Palace, Jaipur (tajhotels.com) - mood, theme and colour only. Structure is different.

1. Project Brief

Prism Hotel Management is **not a hotel**. It is an agency that helps hotels grow their business digitally by building websites, booking engines and management software. The product to build is a **sales website with a working demo** that Prism uses to pitch hotel owners. Visitors should either **Book a Demo** or **Contact us to build their hotel website**.

Primary goal

- Convert hotel owners and managers into demo bookings and enquiries.

Audience

- Hotel owners, general managers and marketing heads (boutique, heritage, resort, business hotels) in India.
- Non-technical. They want clarity, trust and quick proof, not jargon.

What this is NOT

- Not a hotel booking website. No room listings, no check-in dates on the landing page.
- Not a copy of the Taj site. Borrow only its premium feel, colours and typography mood.
- No clutter: no pop-ups, no auto-playing audio, no cookie walls beyond a small notice, no long blog feeds.

Success criteria

- A first-time visitor understands what Prism does within 5 seconds.
- Book Demo is reachable in one click from anywhere on the page.
- Page loads fast and works perfectly on mobile.

2. Design System (taken from the Taj reference)

Taj's site uses a restrained, luxury look: deep black and charcoal, warm gold accents, cream backgrounds, generous white space and an elegant serif for headlines paired with a clean sans-serif for body. The values below are an **approximation of that look** (I could not read the live site's CSS). Treat them as design tokens and adjust if you sample exact values from the page.

Colour tokens

Token	Hex	Use
--color-ink	**#141414**	Headings, nav, dark sections
--color-charcoal	**#2A2A2A**	Body text
--color-gold	**#B8975A**	Accent, primary button, lines, icons
--color-gold-deep	**#9A7B43**	Button hover
--color-cream	**#FAF7F2**	Page background, alternate sections
--color-line	**#E4DCCB**	Borders, dividers
--color-stone	**#6B645A**	Secondary text
--color-white	**#FFFFFF**	Cards, forms

Typography

Role	Font (Google Fonts)	Style
Headlines	Cormorant Garamond (fallback: Playfair Display, Georgia, serif)	Weight 500-600, large, tight leading, sentence case
Body and UI	Inter (fallback: Helvetica, Arial, sans-serif)	Weight 400/500, 16px base, line-height 1.65
Eyebrow labels	Inter	11-12px, uppercase, letter-spacing 0.18em, gold

Components and spacing

- **Primary button:** gold background, ink text, uppercase 13px, letter-spacing 0.1em, 0 radius (sharp corners like Taj), 16x32px padding. Hover: gold-deep.
- **Secondary button:** transparent, 1px gold border, gold text. Hover fills gold.
- **Sections:** 96px vertical padding desktop, 64px mobile. Max content width 1200px.
- **Cards:** white on cream, 1px line border, no heavy shadows, subtle lift on hover.
- **Imagery:** large, high-quality, slightly dark overlay for text legibility. Use royal-hospitality style visuals; embed as optimised local assets or inline SVG placeholders.
- **Motion:** only soft fade-up on scroll (300-500ms). Respect prefers-reduced-motion.

3. Landing Page Structure

One single scrolling page plus one demo page. Section order is fixed. Nothing outside this list gets added.

#	Section	Content	CTA
1	Sticky header	Wordmark 'PRISM' with gold prism icon and 'Hotel Management'. Links: Services, Demo, Process, Contact. Right: **Book a Demo** button. Mobile: hamburger.	Book a Demo
2	Hero	Full-width dark hero image with overlay. Eyebrow 'Digital growth for hotels'. Headline: *We build the software that fills your rooms.* One-line subtext. Two buttons. Small trust line under buttons.	Book a Demo / Watch Overview
3	Overview video	Dark band with a large 16:9 video player. Eyebrow 'See Prism in 2 minutes'. Short heading, one line of text and a poster image with a gold play button. Full spec in section 4.	Play video
4	What we build	4 cards: Hotel Website, Booking Engine, Hotel Management Software, Digital Marketing and SEO. One line each plus small icon.	Learn more (scrolls to contact)
5	Live Demo preview	Split layout: left text, right laptop/phone mockup of the sample hotel app. Explains that the demo can be customised to the hotel's requirement.	Open Live Demo
6	How it works	4 numbered steps: Discovery call, Requirement mapping, Build and review, Launch and growth.	-
7	Why Prism	3 to 4 short proof points with numbers (use placeholders marked editable), e.g. average booking growth, delivery time, support.	-
8	Testimonials	2 or 3 short quotes from hotel owners (placeholders).	-

#	Section	Content	CTA
9	Final CTA band	Dark band, headline 'Ready to grow your hotel digitally?', Book a Demo and Contact buttons.	Book a Demo
10	Footer	Wordmark, short line, email, phone, city, social icons, copyright. Nothing else.	-

4. Overview Video Section

The agency owner will record a short **overview video** explaining what Prism does and how it helps hotels. The page must have a polished spot for it. The video file or link is supplied later, so the section must work with a placeholder until then.

Placement and layout

- Directly below the hero (section 3 of the page). A secondary 'Watch Overview' button in the hero scrolls smoothly to it.
- Ink-coloured band, content centred, player max-width 960px, 16:9 ratio, thin gold border, soft shadow.
- Above the player: eyebrow 'See Prism in 2 minutes' and a short serif heading. Below: one supporting line and a Book a Demo button.
- Mobile: player goes full width with 16px side margin; the text stacks above it.

Video source (configurable)

Setting in siteConfig.js	Purpose
video.type	'file' (mp4/webm hosted with the site), 'youtube' or 'vimeo'
video.src	File path or video URL / ID. Leave empty to show the placeholder state
video.poster	Cover image shown before playing (optimised .webp/.jpg)
video.duration	Label such as '2 min'
video.captions	Optional .vtt subtitle file (English / Hindi)
video.title	Accessible title for the player

Behaviour

- **Click to play only.** Never autoplay with sound. The poster shows a large gold circular play button with the duration label.
- Load the actual player only after the click (lazy load) so the page stays fast. For YouTube use the privacy-friendly youtube-nocookie domain.
- Standard controls: play/pause, seek, volume, fullscreen. Keyboard accessible, with visible focus ring.
- Optional: after the video ends, show an overlay with 'Book a Demo' and 'Replay'.
- Empty state (no video yet): show the poster area with the text 'Overview video coming soon' and no broken player. Mark this with [EDIT ME] in the code.
- Respect prefers-reduced-motion and pause the video if the user scrolls it out of view on mobile.

Recommended video format for the owner

- Length 60 to 120 seconds, 1920x1080 landscape, MP4 (H.264), under 30 MB if self-hosted.

- Suggested outline: who Prism is, the problems hotels face, what Prism builds, a quick glance at the demo, and a call to Book a Demo.
- Add subtitles so it works with sound off.

5. Demo Software (Live Demo page)

The agency needs something to show prospects. Build a **sample hotel application** on its own route (/demo) using a fictional hotel called 'Aurelia Heritage Hotel'. It demonstrates what Prism can build, and it can be re-themed to match any prospect's requirement. Do not use the real Taj name, logo or images.

Demo requirement switcher

- A small floating panel at the top: **Hotel type** (Heritage, Boutique, Resort, Business) and **Accent colour** (4 presets).
- Changing it instantly updates colours, headline copy and section order of the sample hotel site, so each prospect sees 'their' version.
- A persistent bar: **Like what you see? Book a Demo**.

Screens inside the demo

Screen	Must include
Hotel home	Hero, date picker with guests, room highlights, dining and experiences, location, offers.
Rooms and rates	3 to 4 sample room cards with price, size, amenities and a Reserve button.
Booking flow	Step 1 dates and guests, Step 2 room choice, Step 3 guest details, Step 4 confirmation. All client-side with mock data, no payments.
Admin snapshot (read-only)	Simple dashboard: today's arrivals, occupancy %, revenue this week, recent bookings table. Uses mock data.

Use only in-memory mock data. No real backend, payments or personal data are required for the demo.

6. Book Demo and Contact Flows

Book a Demo (modal or /book-demo)

Field	Type	Rule
Full name	text	required
Hotel name	text	required
Work email	email	required, valid format
Phone / WhatsApp	tel	required, 10 digits for India
City	text	optional
Number of rooms	select	1-20, 21-50, 51-100, 100+
What do you need?	multi-select chips	Website, Booking engine, Management software, Marketing, Not sure
Preferred time	date + time slot	optional, next 14 days, Mon-Sat
Message	textarea	optional, 500 chars

Contact (section in footer area or /contact)

- Short form: name, email, phone, message. Beside it: email, phone, WhatsApp button, city.
- Floating WhatsApp button (bottom-right) opens a prefilled chat. Nothing else floats on screen.

Behaviour

- Inline validation, clear error text, disabled submit while sending.
- On success show a friendly confirmation: 'Thank you. Our team will reach you within 24 hours.'
- Submission handler is a single function `submitLead(payload)` that, for now, logs and stores to a mock endpoint, so a real CRM or email service can be plugged in later.
- Include a honeypot field and basic rate limiting to avoid spam.

7. Recommended Tech and File Structure

Area	Choice
Framework	React with Vite (or Next.js if SEO rendering is preferred) plus Tailwind CSS
Routing	/ (landing), /demo, /book-demo, /contact
Icons	lucide-react or inline SVG
Video	Native HTML5 video or lazy-loaded YouTube/Vimeo iframe
Forms	React Hook Form with Zod validation
Hosting target	Any static host (Vercel, Netlify)

```
src/
components/ Header, Hero, VideoSection, ServiceCards, DemoPreview, Steps, Proof, Testimonials, CTABand, Footer, LeadForm
demo/ HotelHome, Rooms, BookingFlow, AdminSnapshot, ThemeSwitcher, mockData.js
styles/ tokens.css (colour and type tokens from section 2)
lib/ submitLead.js
pages/ Landing, Demo, BookDemo, Contact
```

8. Quality Requirements

Responsive

- Design for 360px, 768px, 1024px and 1440px. No horizontal scrolling at any width.
- Tap targets at least 44px. Header collapses to a hamburger below 900px.

Accessibility and performance

- WCAG AA contrast: use ink text on gold buttons and white text on ink backgrounds; never gold text on cream for body copy.
- Semantic HTML, visible focus rings, alt text, form labels, keyboard-friendly modal.
- Lighthouse targets: Performance 90+, Accessibility 95+, SEO 95+. Lazy-load images, preload headline font.
- Set page title, meta description and Open Graph tags for Prism Hotel Management.

Content rules

- Plain, confident English for hotel owners. No buzzwords, no long paragraphs (max 25 words per sentence in marketing copy).
- All unknown facts (phone, email, stats, testimonials, logo) are clearly marked **[EDIT ME]** placeholders, never invented as real claims.
- Keep every contact detail, the video settings and each statistic in one config file (`siteConfig.js`) for easy replacement.

9. Instructions for the Building Agent

Follow in order

- 1. Create tokens.css from section 2 and load the two fonts.
- 2. Build the landing page sections in the exact order of section 3, including the overview video (section 4).
- 3. Build the /demo sample hotel app with the requirement switcher (section 5).
- 4. Implement Book Demo and Contact flows (section 6).
- 5. Test at all breakpoints, then run through the checklist below.
- 6. Do not add extra pages, pop-ups, animations or sections that are not in this brief. If something is ambiguous, choose the simplest customer-friendly option and note it in the README.

Acceptance checklist

Check	Pass condition
Identity	Reads as an agency site for hotels, never as a hotel site
Theme	Black, gold and cream palette with serif headlines, matching the Taj mood
Video	Overview video section works with a file or link, click-to-play, lazy loaded, with a clean placeholder when empty
Clarity	Hero message and Book a Demo visible without scrolling
Demo	/demo works end to end with theme switcher and mock booking flow
Forms	Validation, success state and submitLead hook all working
Mobile	Fully usable at 360px, no layout breaks
Cleanliness	No unnecessary sections, pop-ups or autoplay media
